

Superior efficiency rules the water.

Think about ITT.

Introducing the Lowara Pumps

e-SV™ Series:

energy efficient, economical
and easy-to-install stainless steel
multi-stage pumps.

Powerful, intelligent and constantly in motion, not just adapting to their surroundings, but dominating them. Like sharks, e-SV™ pumps are tough, efficient and built to last. Thanks to a unique combination of new hydraulic design and higher efficiency motor, the e-SV™ delivers lower overall life-cycle costs and superior efficiency compared to most pumps available today.

- Optimized hydraulic design results in superior boosting performance, efficiency and NPSHr levels.
- All stainless-steel construction permits WRAS and ACS certification.
- Expanded line of pump sizes for wide range of applications.
- Patented i-ALERT™ monitor continuously measures vibration to support optimum performance. Available on pumps 7,5kW and above.
- New design eliminates need to remove motor, reducing repair time by up to 50 percent.

Now there's more than one way to rule the water.

ITT

Engineered for life

Efficiency wins in all sizes. Think about ITT.

Introducing the Lowara Pumps

e-SV™ Series:

energy efficient, economical and easy-to-install
stainless steel multi-stage pumps.

When it comes to efficiency, you need the top performer no matter what the size. Our e-SV™ pumps deliver superior efficiency for the life of the pump, whether the application is large or small. Thanks to a unique combination of new hydraulic design and higher efficiency motor, the e-SV™ delivers lower overall life-cycle costs and superior efficiency compared to most pumps available today.

- Optimized hydraulic design results in superior boosting performance, efficiency and NPSHr levels.
- All stainless-steel construction permits WRAS and ACS certification.
- Expanded line of pump sizes for wide range of applications.
 - Patented i-ALERT™ monitor continuously measures vibration to support optimum performance. Available on pumps 7,5kW and above.
 - New design eliminates need to remove motor, reducing repair time by up to 50 percent.

With e-SV™ pumps you've got a winning choice no matter what size you need.

ITT

Engineered for life

Now there's a much more efficient way to transport water.

Think about ITT.

Introducing the Lowara Pumps

e-SV™ Series:

energy efficient, economical and easy-to-install stainless steel multi-stage pumps.

Camels are the ultimate in efficiency, traveling for up to two weeks without water. The new e-SV™ pump can go even further, keeping water moving efficiently on-demand whenever its needed. Thanks to a unique combination of new hydraulic design and higher efficiency motor, the e-SV™ delivers lower overall life-cycle costs and superior efficiency compared to most pumps available today.

- Optimized hydraulic design results in superior performance, efficiency and NPSHr levels.
- All stainless-steel construction permits WRAS and ACS certification.
- Expanded line of pump sizes for wide range of applications.
- Patented i-ALERT™ monitor continuously measures vibration to support optimum performance. Available on pumps 7,5kW and above.
- New design eliminates need to remove motor, reducing repair time by up to 50 percent.

Now you can keep water moving as long as you need it, more efficiently than ever.

Engineered for life

Superior efficiency keeps you going.

Think about ITT.

Introducing the Lowara Pumps

e-SV™ Series:

energy efficient, economical and easy-to-install
stainless steel multi-stage pumps.

Fast, agile and built like no other species on earth. Hummingbirds virtually never quit, and neither will the new e-SV™ pump. Thanks to a unique combination of new hydraulic design and higher efficiency motor, the e-SV™ delivers lower overall life-cycle costs and superior efficiency compared to most pumps available today.

- Optimized hydraulic design results in superior boosting performance, efficiency and NPSHr levels.
- All stainless-steel construction permits WRAS and ACS certification.
- Expanded line of pump sizes for wide range of applications.
- Patented i-ALERT™ monitor continuously measures vibration to support optimum performance. Available on pumps 7,5kW and above.
- New design eliminates need to remove motor, reducing repair time by up to 50 percent.

Efficient, economical and easy to install.
It's a beautiful thing.
